Dear Hiring Manager,

I am a technology and business systems professional with nearly 30 years of experience helping organizations understand complex problems and turn them into practical technology solutions. My background spans software development, enterprise systems, data and analytics, IT leadership, business process improvement, entrepreneurship, and, more recently, AI and workflow automation.

Throughout my career, I have worked directly with executives, business owners, operational teams, technical teams, and end users. A large part of my work has always been listening to what people are trying to accomplish, asking the right questions, translating business requirements into technical solutions, demonstrating those solutions, training users, and staying involved through implementation and production support.

I have more than 15 years of experience conducting software demonstrations and end-user training. I enjoy taking technology that may initially feel complicated and explaining it in practical terms. I have found that successful technology implementation is not only about building the right system; it is also about helping people understand why it matters and how it can make their work better.

Today, I am applying that same approach to AI and automation. I build practical AI-enabled workflows using tools such as ChatGPT, Claude, Retell AI, Airtable, Zapier, Make, Power Automate, Zoho, APIs, and related technologies. One recent project is an AI voice agent for an owner-operator freight business. The agent receives calls from shippers and freight brokers, gathers new load opportunity information, and converts the conversation into structured data that can be used in databases and downstream automated workflows.

Earlier in my career, as an IT Director, I worked with business leadership to design and implement a global BI and e-commerce platform. I presented solutions to stakeholders, gained business buy-in, led implementation and adoption, and helped connect technology decisions to commercial objectives. The transformation increased digital product sales while significantly reducing technology costs and became part of the company's growth and transition into Argus Media.

I have also built and operated my own businesses, which has given me a practical understanding of revenue, operating costs, customer experience, process efficiency, and the realities of implementing technology with limited time and resources. That experience influences how I approach technology today: I look for solutions that solve a real problem and create measurable value rather than using technology simply because it is new.

I am most effective in roles where I can combine business understanding, technical experience, problem-solving, communication, and hands-on execution. I am comfortable working between business and technical teams and learning new platforms as the situation requires.

I would welcome the opportunity to discuss how my background could contribute to your organization. I can also provide demonstrations of recent AI and automation work when relevant to the position.

Thank you for your time and consideration.

Sincerely,

Eunice Una Gobbato
